EN ISO 20345

The standard EN ISO 20345 defines both the basic and additional requirements for safety shoes for commercial use. Footwear in accordance with EN ISO 20345 is intended to protect the wearer from bumps, crushing, falling or rolling objects, from walking into sharp or pointed objects, heat or cold, and hot substances.

Examples of aspects dealt with in the standard are handling mechanical risks, slip resistance, thermal risks and ergonomic properties. Additional standards relating to individual activities deal with risks in relation to footwear with electrical insulation, for example, and shoes to protect against chemicals, etc.

The basic requirements described in EN ISO 20345 include:

- height of the upper
- heel area on boots
- minimum length, pressure and bump impact resistance of the toe cap
- water vapour permeability and water vapour number of the upper
- outsole thickness and abrasion resistance of the outsole
-

Safety footwear is divided into different protection classes depending on the requirements fulfilled. The safety footwear in protection class SB fulfil the minimum requirements in accordance with EN ISO 20345. Safety footwear with additional requirements are divided into protection classes S1 to S5 depending in the properties.

RED HEAT RESISTANT PREMIUM LEATHER GLOVES

Colour: Red | 13-100102

EN166

EN166 is an international standard by the European Committee for Standardization (CEN) that mandates specific performance criteria for personal eye protection equipment used in industrial applications. It requires safety glasses to meet certain requirements, such as impact resistance, UV filtering, and visual clarity. Furthermore, it outlines testing methods to ensure eyewear meets these quality standards.

EN.166S (Safety glasses): These glasses have the highest level of protection and are designed to withstand the impact of a 22 mm steel ball weighing 43 grams dropped from 1.3 meters at a speed of 18 km per hour. The lens must remain in the frame and is not to shatter, while the frame must remain intact as well.

EN.166F (Safety glasses): These glasses offer a slightly lower level of protection and are designed to withstand the impact of a 6 mm steel ball weighing 0.86 g fired at 162 km per hour.

EN.166B (Safety glasses): These glasses offer the lowest level of protection and are designed to withstand the impact of a 6 mm steel ball weighing 0.86 g fired at 432 km per hour. The lens must remain in the frame and not shatter, while the frame must also remain intact.

Hard Hat 2 Point Chin Strap

Code: 13-100390

FEATURES

- Elastic Strap
- Adjustable
- Plastic Chin Cup

Hard Hat 6 Point Liner
