Double Pulse MIG Welding

The built-in double pulse function makes the weld of aluminum alloy more perfect: on the basis of a group of high frequency pulse, a group of low frequency pulse current is superimposed, which has a double stirring effect on the weld puddle. It is beneficial to the separate out of gas and slag and improves the welding quality, which is suitable for welding aluminum alloy and forms ripple effect to the surface.

Perfect Droplet Transition, Lower Spatter Welding

With the synergic matching parameters, the welder only needs to adjust the arc stiffness and arc length (inductance and arc pressure) properly to realize the lower spatter welding in the welding process.

Wire Feeder Inner Structure

Powerful 2x2 double drive four roll wheel wire feeding device:

- 24V motor drive
- Independent pressure regulation of two groups of roll wheels
- The roll wheels can adapt to coarse wire, flux-cored wire, solid wire, aluminum wire, etc.

Welding Skull Cap Red

The Pinnacle welding skull cap is manufactured from 100% cotton, the cap is worn underneath the workers welding helmet, hard hat and/or brow cover. This serves to protect the users exposed neck area and also provides a more sanitary safety hat or helmet by preventing perspiration and germs from contaminating the safety hat or welding helmet
